

These are copies of pivot tables that show frequency counts for all of the tables with more and more detail as you move to the right. The first pivot copy provides an overview of what is in each table.

Each table is more detailed than the previous one, so each table is also longer than the previous one.

Example: in the first pivot table, the language list table has 144 records.

The second pivot table shows that these 144 records can be broken down into 142 languages records and 2 language list records.

Warning: these tables will not be updated for minor changes in the database.

They are intended only to provide an overview of the data and how it is organized.

To see the most current version of the data, create your own pivot table or similar reference based on the most current download.
